

ExtensionSentry Forensic Intelligence Report

Extension	Volume Booster
Version	1.0.4
Archive	volumebooster_forensic_zipped.zip
SHA256	2caa70db05b1e3be73f59beb625e5e1addf09b741fa7cec63d626b75a5a47f00
Risk Score	31/100
Threat Level	GUARDED
Verdict	Monitor

Executive Narrative

Low-severity indicators were detected. Keep the extension in monitored inventory.

Findings

HIGH - High-risk Chrome permission: webRequest

Observe network traffic.

Recommendation: Constrain capabilities with optional permissions and explicit user gestures.

HIGH - Extension requests broad host access

The extension can observe or modify content across a large browsing surface.

Recommendation: Replace broad host permissions with exact domains and optional host grants.

MEDIUM - Content scripts inject across broad URL patterns

Automatic injection across many origins expands the data exposure boundary.

Recommendation: Restrict content scripts to approved business domains.

MEDIUM - Sensitive token storage pattern

Credential-like data appears to be stored in browser-accessible storage.

Recommendation: Move secrets to server-side storage or encrypted short-lived tokens.

LOW - High-entropy minified JavaScript

Dense high-entropy code reduces reviewability.

Recommendation: Request readable source before approval.

LOW - Dynamic HTML DOM sink usage

HTML-writing sinks can become XSS vectors when paired with untrusted input.

Recommendation: Use safe DOM APIs, templates, and strict sanitization.

LOW - High-entropy minified JavaScript

Dense high-entropy code reduces reviewability.

Recommendation: Request readable source before approval.

MEDIUM - Insecure HTTP endpoint references

The extension references endpoints that can be intercepted or modified in transit.

Recommendation: Use HTTPS for all remote endpoints.
