

ExtensionSentry Forensic Intelligence Report

Extension	Analyzed Chrome Extension
Version	2.5.0
Archive	shazam_forensic_zipped.zip
SHA256	1e6c2d8055601b524478870b6a1ed02fdbe4c837aa70961c76112325e7384a02
Risk Score	9/100
Threat Level	GUARDED
Verdict	Monitor

Executive Narrative

Low-severity indicators were detected. Keep the extension in monitored inventory.

Findings

MEDIUM - Content Security Policy permits unsafe eval

Eval-like execution weakens protection against malicious dynamic code paths.

Recommendation: Remove unsafe-eval and ship static bundled scripts.

LOW - High-entropy minified JavaScript

Dense high-entropy code reduces reviewability.

Recommendation: Request readable source before approval.

LOW - Dynamic HTML DOM sink usage

HTML-writing sinks can become XSS vectors when paired with untrusted input.

Recommendation: Use safe DOM APIs, templates, and strict sanitization.

MEDIUM - Insecure HTTP endpoint references

The extension references endpoints that can be intercepted or modified in transit.

Recommendation: Use HTTPS for all remote endpoints.

MEDIUM - IP literal network destinations detected

Hard-coded IP destinations bypass domain ownership controls.

Recommendation: Investigate IP ownership and replace literals with approved domains.

MEDIUM - Suspicious external domain indicators

The extension references domains with risky TLDs or exfiltration-service keywords.

Recommendation: Validate ownership before deployment.
