

ExtensionSentry Forensic Intelligence Report

Extension	Payload Helper
Version	1.0
Archive	payload.zip
SHA256	e1a2cd80a9030ae9c8f11df4e8ee9eb3d341c6310a5db1215c272b2bebc20da0
Risk Score	97/100
Threat Level	CRITICAL
Verdict	Quarantine recommended

Executive Narrative

Multiple high-confidence indicators create an emergency review posture.

Findings

HIGH - High-risk Chrome permission: tabs

Read tab titles, favicons, and URLs.

Recommendation: Constrain capabilities with optional permissions and explicit user gestures.

HIGH - Extension requests broad host access

The extension can observe or modify content across a large browsing surface.

Recommendation: Replace broad host permissions with exact domains and optional host grants.

CRITICAL - Dynamic eval execution detected

Eval can execute remotely influenced strings as privileged extension code.

Recommendation: Remove eval and replace dynamic execution with static dispatch tables.

MEDIUM - Insecure HTTP endpoint references

The extension references endpoints that can be intercepted or modified in transit.

Recommendation: Use HTTPS for all remote endpoints and pin trusted service domains where possible.

HIGH - IP literal network destinations detected

Hard-coded IP destinations bypass domain reputation and ownership controls.

Recommendation: Investigate IP ownership and replace literals with approved domains.
